

## A Fifteen Gallon Holding Tank

### Kracor mold #5022, 15 gallons, 56.8 liters

The drawing above shows the plumbing to install the tank under the port V-berth and with both a deck pumpout and an electric macerator pump for overboard discharge.

These drawings show the vents in the top surface of the tank. The height of the vent fittings makes this a tight fit in the newer boats and requires some modification of the plywood in the older boats. It's suggested that you have the vents mounted at the top edge of the end panel of the tank. Kracor will install the vents wherever you choose. You can order through Fawcett's or West Marine.
